

Similar to our ANSI/EIA-748 Compliance Review and Gap Analysis, our third-party EVMS Compliance Assessment/DCMA Certification Readiness Review uses the National Defense Industrial Association (NDIA) Program Management Systems Committee (PMSC) Earned Value Management Systems Intent Guide framework to assess the company's EVMS but in this review, the organization must present evidentiary documentation and program data that shows that they follow their documented policies and procedures and are compliant with the EVMS Standard. A detailed review of the EVMS is performed and in-depth interviews are conducted with program managers, control account managers and program controls personnel. The output from this effort is a report that documents the level of ANSI EVMS standard compliance the company has achieved and may be used as evidence of a third-party review of the company's EVMS.
